

Info Kiosk

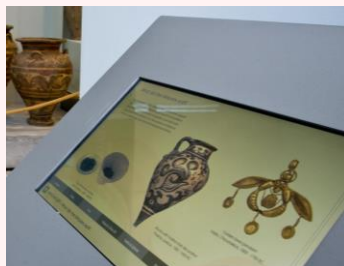

Overview

Info Kiosk provides information in the form of an electronic book augmented with additional features. Each thematic category contains text, image, video clips and/or micro-games. Texts may include hyperlinks which provide further information and related multimedia content through a pop-up window. The system supports multi touch interaction.

Additional Information

Information presented through Info Kiosk can be organized in several chapters. Each main chapter allows navigation to related information, which can be further categorized into sub-menus. The user is able to explore descriptive information, accompanied by images, video clips, 3D models and/or animations, either by scrolling down/up the digital book or by directly selecting the specific category, which will automatically present the corresponding information. Info Kiosk allows the presentation of 3D models and navigation by using rotate, zoom in/out, and pan tools.

Info Kiosk supports micro-games in order to engage users to complete the plot of a story through interactive mini games. An animated avatar indicates where interaction through touch is required in order the user to complete a task and proceed to the following information.

Heraklion Archaeological Museum

Mini-game with animated avatar

Permanent public installations: Heraklion Archaeological Museum
