

Peridexion

Overview

Peridexion is a system that offers users the possibility of exploring an object and/or a subject in depth. The system has a touch screen that presents a view of an object at a time. Visitors can select the object or the view they wish to see and then discover points of interest and relative multimedia information, or zoom in on any detail at will.

Exploring information in depth

The presentation is multi-faceted and connections between different objects with similar subjects can be made

Additional Information

The system can be used in any cultural heritage or commercial context.

Permanent public installations:

- Messara Valley Tourist Information Center, Holy Diocese of Gortyna and Arkadia, Moires, Heraklion
- Archaeological Museum of Thessaloniki, as part of "Macedonia: From fragments to pixels" exhibition
